Heartbox * Technicolor dark theme * <https://heartbox.f00.sh>

STANDARD OPERATING PROCEDURE

Document: SOP-HEARTBOX-OPS-001

Date: 2026-07-29

Version: v0.1.0

Standard: NASA NAII 1450.3 memorandum layout

Reply to Attn of: OPS/HEARTBOX

TO: Maintainers and Release Operators

FROM: Project Engineering

SUBJECT: Heartbox operator standard operating procedure (palette, ports, deploy, release)

REF: AGENTS.md, README.md, CHANGELOG.md, themes/TEMPLATE.md

Bottom line: Heartbox is a single canonical dark palette with many application ports. Operators edit `palette/heartbox.json`, regenerate ports, deploy the product site on Cloudflare Pages (`heartbox.f00.sh`), and ship SemVer releases with the full documentation pack.

1. Purpose

This memorandum is the living operator handbook for Heartbox. It states how to change colors, regenerate ports, deploy the site, and ship a versioned release.

2. Scope

This SOP covers product operations for Heartbox. It does not replace the README, man page, or the live site at <https://heartbox.f00.sh>.

- product identity
- palette edit rules
- port generation
- Cloudflare Pages deploy and DNS
- release ship flow and docs pack
- failure responses

3. Product identity

Item	Value
Product name	Heartbox
Site	https://heartbox.f00.sh
Repository	github.com/f00-sh/heartbox
License	MIT
Canonical palette	palette/heartbox.json
Generator	scripts/generate-themes.py
Edge host	Cloudflare Pages project f00-heartbox
DNS	heartbox.f00.sh CNAME -> f00-heartbox.pages.dev
Default branch	main
Published version	v0.1.0

4. Product laws

4.1 All ports derive from palette/heartbox.json. Do not invent one-off hex values.

4.2 Silver (#B8C0C8) is required on cursor, chrome, and punctuation tokens.

4.3 Warm hospital-night blacks; poppy red is the hero accent; cream foreground - not pure white.

4.4 Cloudflare Pages is the delivery plane for the public site. GitHub is source and release history only.

4.5 Every SemVer release updates CHANGELOG, file_id.diz, README, man, SOP PDF, and this-version release memo PDF.

5. Day-to-day operator flow

Use this path for palette changes and port quality checks.

5.1 Clone github.com/f00-sh/heartbox and enter the repository root.

5.2 Edit palette/heartbox.json only when changing colors.

5.3 Run: python3 scripts/generate-themes.py

5.4 Review git diff under palette/ and themes/. Confirm silver still appears on cursor tokens.

5.5 If tokens changed, update site/app.js COLORS and site/styles.css :root to match.

5.6 Open site/index.html locally and confirm swatches and poppy field render.

Figure 1. Palette change quality gates

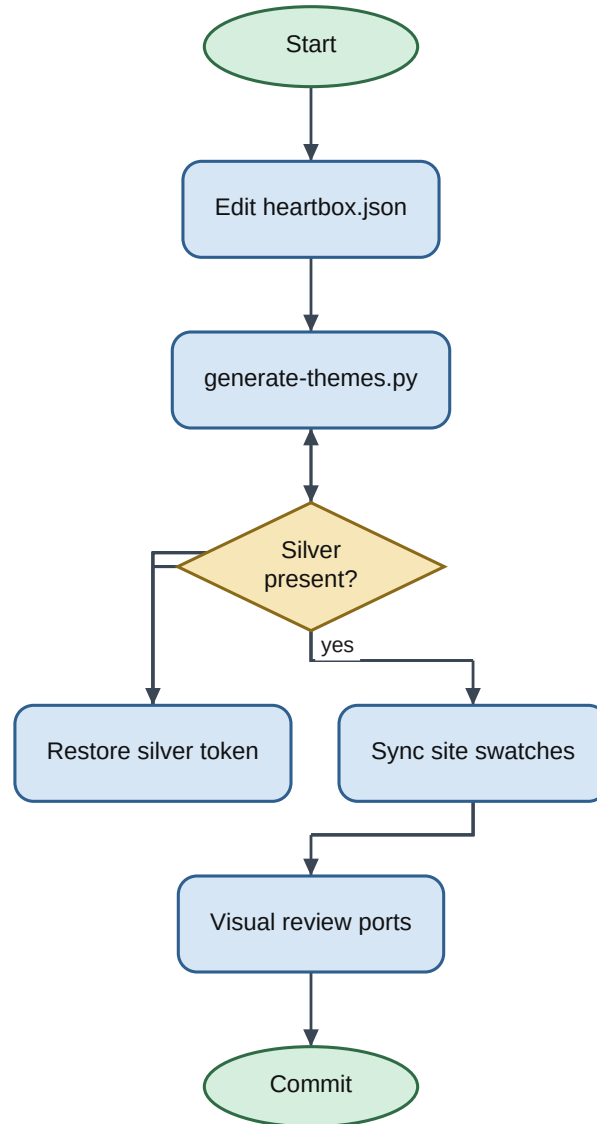

Figure 2. Heartbox canonical palette

Token grid used across all ports. Poppy red is the hero accent; silver is the cool metal jacket token.

6. Deploy site

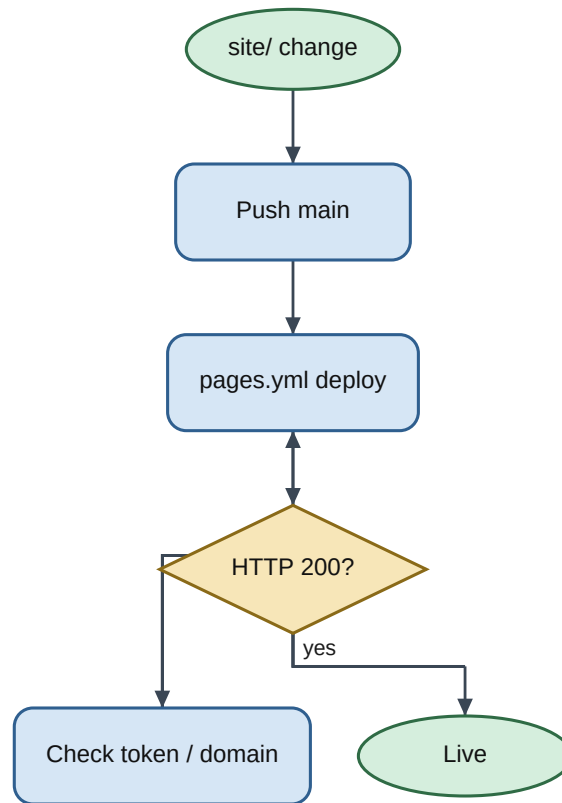

6.1 Push site/** to main (GitHub Actions pages.yml deploys with CLOUDFLARE_API_TOKEN).

6.2 Or manual: `npx wrangler pages deploy site --project-name=f00-heartbox --branch=main`

6.3 Verify <https://f00-heartbox.pages.dev> and <https://heartbox.f00.sh> return HTTP 200.

6.4 DNS: CNAME heartbox.f00.sh -> f00-heartbox.pages.dev (proxied). Custom domain attached on Pages project f00-heartbox.

Figure 3. Site deploy path

7. Release ship flow

7.1 Bump version in palette/heartbox.json, CHANGELOG.md, file_id.diz, README, SOP version.

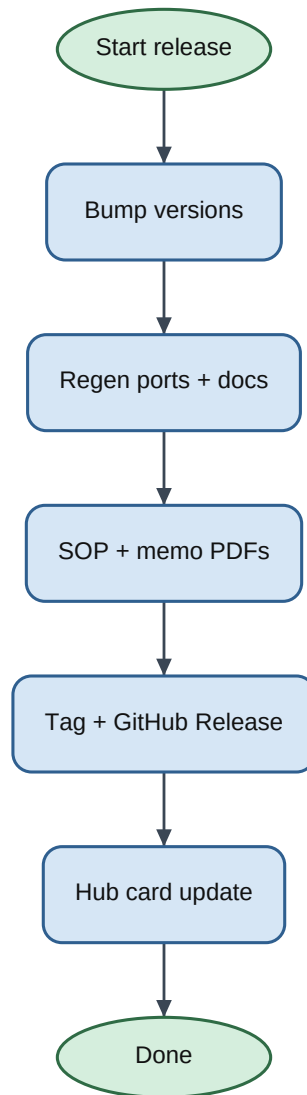

7.2 Regenerate ports. Update man page if tokens or install paths changed.

7.3 Render NASA SOP PDF and this-version NASA release memo PDF via memo-pdf skill.

7.4 Tag vX.Y.Z, create GitHub Release, attach install.sh, file_id.diz, SOP PDF, memo PDF.

7.5 Update f00 hub product card on first ship or when copy/links change.

Figure 4. SemVer release ship

8. Failure responses

- Generator fails: fix JSON syntax in palette/heartbox.json, re-run.
- Pages deploy 401: refresh CLOUDFLARE_API_TOKEN and account id secrets.
- Custom domain 522: wait for certificate validation; confirm CNAME proxied to f00-heartbox.pages.dev.
- Port contrast poor: adjust token in palette only, regenerate all ports together.
